Communications

## Tactical Communication Module

Platforms integrated with communications suite that enables the secure transmission of video, voice and data with the ability to interconnect different tactical networks.

## Strategic Communication Module

Vehicles that enables the creation of a backbone of wide band communication network to connect tactical networks to Command and Control Centers.

## Secure Communication Network

Wide Band Communication Backbone with full suite of security and cryptography, constituted by a mesh of radio links, fiber optics and satellite communication able to interconnect different governmental and military organizations with high availability, providing high capacity links between sensors and Command and Control Centers.

## Network Operation Centers (NOC)

The NOC is a dedicated center to ensure that readiness and availability of critical communication systems are maintained in satisfactory levels to perform day-to-day operations regardless of what is happening around.
